

SMART FLOOR

TRACK • MONITOR • INFORM

Senior Embedded Software Developer (32-40h/week)

The Smart Floor is a young, innovative company developing a wearable for healthcare and sport applications. The goal is to measure and analyse precise movement in healthcare and sports domains. More information on: <https://smartfloor.com>

You will be part of the multi discipline team responsible for bringing to market our new wearable device, and continue innovation of the wearable. The wearable is responsible to collect and analyse various sensor data, and is then sent to our cloud environment that translates them into valuable information for medical staff, sport trainers and coaches.

Main requirements:

- You have a degree (HBO / WO) in Computer Science, Electrical Engineering or equivalent experience
- You are experienced with C programming language
- You are experienced with MicroPython, or have a strong interest in
- You are motivated to work with a young, dynamic and agile team
- You like to work in a startup environment where you can influence key decisions (product design, software architecture,...) and interact daily with your customers and company founders.
- Your English language skills are good, both spoken and written

Benefits & Perks

- We are flexible with working hours and working location
- We offer a job at a fast growing startup with the ambition to grow worldwide
- Our office in Strijp-S (Eindhoven) is easily reachable with public transport
- We pay your public transport expense home to work
- A salary conformed to your level of expertise

Please send your CV to Pierre-Yves Vincent (pierre@smartfloor.com) .
